## DECEMBER MOON

The moon has come out too soon,  
it's still the middle of the afternoon  
and the day shows no sign of darkness.

What is the moon doing,  
sneaking into the sky when it's light?

What is the moon playing at?  
Couldn't it sleep?  
Has its alarm clock rung too soon?

Do we see the moon this early  
in June or September?

Or does December bring a special moon,  
a let's-get-these-nights-over-soon moon,  
a can't-wait-for-Christmas-to-come moon?
